                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a peptide conjugate having the formula:

(C (R*)n Peptide where n = 1-10; X = C-0, when the R* y group is attached to the N-terminus of the applies, or a side chain of the peptide where the functional group of the side chain is NH2 or OR; or X = 0 or NH.

C the functional group of the side chain is NH2 or OR; or X = 0 or NH.

C side chain of the peptide, where the side chain functional group is COOH, or X = 0 or CNH2; on R = 2-18C alkyl or late (high functional group is COOH).

C side chain of the peptide, where the side chain six ly containing one or CONH2; on R = 2-18C alkyl or Love (high functional group is COOH).

C or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally composite that a 1-5C straight or branched chain alkyl group, or benzyl. The peptides a NAB3701-187058 represent reamples of alkyl group, or benzyl. The peptides a NAB3701-187058 represent analogues of a Rel -2 superfamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the call death agonist Bad. The peptides conjugate is useful for modulating apoptosis in the cells of a subject, or for corresing B cell lymphoma/Leukamia 2 (Bell-2) mediated blockage of a Rel -2 superfamily polypeptide corresponding to amino acids 72-97 of C useful for modulating apoptosis in the peptide conjugate is useful for treating a subject affilicted with a cancer cells of a subject affilicted with a cancer cellace on jugate is useful for treating a subject affilicted with a cancer cellace on jugate is useful for treating a conjugate is also useful for conjugate is necessarily. The peptide conjugate is also useful for creating a conjugate is also useful for conjugate is also useful for creating a conjugate is also useful for creating a conjugate is also useful for creating a subject affilicted with a cancer cells of an area of a conjugate is also useful for creating a conjugate is also useful for creating a conjugate is also useful for creating a subject affilicted with a cancer cells of a conjugate is also an

The invention relates to a peptide conjugate having the formula:

(R-X)n repetide where no conjugate having the formula:

(R-X)n repetide where no conjugate having the peptide where

the functional group of the side chain is NH2 or OH; or X-OON

CC when the R-X group is attached to the C-terminus of the peptide, or a

side chain of the peptide, where the side chain functional group is containing one

or convir, and R-2-18C alkyl or alkoxy, 2-14C alkylanyl containing one

or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally

CC monosubstituted with a 1-5C straight or branched chain alkyl group,

CC phanyl optionally monosubstituted with a 1-5C straight or branched chain

CC alkyl group, or benzyl. The peptides ABB7001-B3705B represent analogues

CC of a Rel-2 superfamily polypeptide corresponding to makin acids 72-07 of

the BB3 domain of the cell death agonist Bad. The peptide conjugate is

CC useful for modulating apoptosis in the cells of a subject, or for

CC superior Bc-2-1 relates the peptide conjugate is useful for treating a

custing B cell lymphoma/leukenia 2 (Bcl-2) mediated blockage of

The invention relates to a peptide conjugate having the formula:

((R.X)n peptide where a = 1-10; X - C-0, when the R-X group is attached to the N-terninus of the peptide, or a side chain of the peptide where to the functional group of the side chain is NHZ or OH; or X = 0 or NH.

Che when the R-X group is attached to the C-terninus of the peptide, or a side chain of the peptide, where the side chain is functional group is COH or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or CONH2; and R = 2-18C alkyl or the C-terninus of the peptide, or a side chain of the peptide, where the side chain functional group is COH or two double bonds, cyclobutyl. cyclopartyl, cyclohaxyl optionally composite the consumption of the conjugate or branched chain alkyl group, or benzyl. The peptides with a 1-SC straight or branched chain alkyl group, or benzyl. The peptides ABB7001-337058 represent examples of the geptide peptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist BAd. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukenia 2 (Bcl.-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 conjugate is custous affilicted with a cancer includes prostate conjugate is useful for treating a consumption of the conjugate is conjugate in the coll of concerts, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by cancer cells that conjugate is also useful for peptide conjugate is neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for period cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for period cancers, neuroblastoma, acquired conjugate is also useful for cancer characterized by cancer characterized by cancer a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 18;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a peptide conjugate having the formula:

(C (R.N)n peptide where n = 1-10; X = C=0, when the R-X group is attached cot the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = 0 or NH.

CC when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is containing one or CONH2; and R = 2-18C alkyleryl, cyclohexyl optionally or containing one or two double bonds, cyclobutyl, cyclohexyl, cyclohexyl optionally complexed with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ANB37001-B37058 represent examples of the peptide with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ANB37001-B37058 represent examples of a Bcl 2 superfamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist BH3. The peptides conjugate is useful for modulating apoptosis in the cells of a subject, or for the BH3 domain of the cell death agonist BH3. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for creversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of conjugates in cancer cells; it is also useful for inhibiting Bcl-2 (C function. In particular, the peptide conjugate is useful for treating a subject affilteed with a cancer cincarecterized by cancer cells that consumption or thyroid cancers, neuroblostoma, melanoma, or conjugate is also useful for treating disorders characterized by cancer cells that conjugate is also useful for creating a conjugate is also useful for creating conjugate is also useful for cancer colls that conjugate is also useful for creating disorders characterized by cancer cells that conjugate is also useful for creating disorders characterized by cancer colls that conjugate is also useful for creating disorders characterized by cancer characterized by cancer characterized by cancer characterized by cancer characterized b

New mutant Bol \*Ku/Bol-2 Associated Cell Death Regulator polypeptide, useful for sorreuning for candidate compounds which induce or inhibit apoptosis, comprises amino acid substitutions at Serl18, Serl55 or Serll3 -

Claim 7; Page 148-149; 157pp; English

The present invention describes an isolated or synthetic polypeptide

(1) comprising a less than full length amino acid sequence of a mutant

CC English and session than full length amino acid sequence of a mutant

CC fragment, which contains amino acid substitutions at Serila of a human

CC BAD (shorter murine BAD). (1) has immunostimulant neuroprotective,

conotropic, antilischaemic, vulnerary, cytostatic.

CC antiarthritic, antilischaemic, vulnerary, cytostatic.

CC antiarthritic, antilischaemic, vulnerary, cytostatics, antiviral,

CC con be used as an apoptosis inducer or inhibitor. BAD polypeptides and

CC polynucleotides can be used for screening candidate compounds and drugs

CC for activity that promote cell survival or apoptosis. Other uses include

CC for activity that promote cell survival or apoptosis. Other uses include

CC inducing or inhibiting apoptosis in a cell. Candidate compounds

CC inducing or inhibiting apoptosis in a cell. Candidate compounds

CC interior or the present candidate compounds

CC imphoproliferative conditions, arthritis, infertility, inflammation and

CC alimed shorter murine BAD mutant amino acid sequence from the present

Sequence 162

                                                                                                                                                                                                                                                                                                                                               This sequence represents the murine hol-x(L)/hol-2 associated death promoter (Bad) gene. Bad is a 22.1 kb protein which interacts with bol-2 and bol-x protein and requilates cell death. It has bomology to the bol-2 related family clustered in the Bil and BEZ domain. Bad has been found to hybridise to bol-x(L) and bol-2 in yeast two-hybrid asseys and in vivo in mammalian cells. Overexpressed Bad counters the death inhibitory activity of bol-x(L), but is much less effective at countering the death inhibitory activity of bol-x(L). Bad expression can accelerate apoptocic cell death induced by cytokine deprivation in an IL-3 dependent cell in the expressing bol-x(L), and its also counters the death repressor activity of bol-x(L). Bad competes with Bax for binding to bol-x(L). Bad may be used to identify agents which inhibit its binding to bol-2 or bol-x(L) to form beterodimers. Such agents may be used to treat neurodegenerative diseases, immunodeficiency diseases, and NICs sensesone or rischements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polynucleotide encoding bol-x(L)/Rcl-2 associated death promoter useful to treat neophasia and apoptosis and to identify agents inhibiting its binding to bol-2 or bol-x(L) to form heteromultimers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1996-251465/25.

Mutant BCL-XL/BCL-2 associated cell death regulator #1.
Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD

B 8

SXAXEXEX

```
The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell clearly registator) proteins, having an maino acid other than Ser at C position 112 and/or 135, relative to the murine BAD 204 as sequence. The position 112 and/or 135, relative to the murine BAD 204 as sequence. The CC present sequence represents a mutant BAD protein. Also described are: (1) CC fusion proteins of mutant BAD protein as are used to treat cor prevent diseases associated with reduced appropriate. For covering infection, appropriate, infertility, (2) CC inflammation and autoimmune disease, Polynucleotias expences encoding mutant BAD proteins are used to treat covering infection, appropriated expences encoding mutant BAD proteins and autoimmune disease, Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated animals for use as disease models or in drug screening. BAD correcting shosphorylated septencers inhibitors are potentially useful intreatment of excessive apoptosis such as alias, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is considered and non-composition of proteins and non-composition of proteins have considered and polynophorylated and baD, by usual immunoassays mutant BAD proteins have compositing activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not become the protein activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not the cycosol, thus promoting cell survival. The mutants with Ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell clear for regulator) proteins, having an amino acid other than Ser at C position 112 and/or 156, relative to the murine BAD 204 as sequence. The position 112 and/or 156, relative to the murine BAD 204 as sequence. The constitution of the present sequence represents a mutant BAD protein. Also described are: (1) CC fragments of mutant BAD protein BAD 204 as rejuence represents a mutant BAD protein. Also described are: (2) Cf fusion proteins of mutant BAD proteins polypeptide that the configuration of discasses associated with reduced approbals, e.g. cancer viral infection, lymphoproliferation, arthritis, infertility, (2) Cf inflammation and autoimmune disease. Polynucleotist esquences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug streening. BAD creations phosphorylated such as AIDS, neurodegeneration, and inhibitors of serine phosphatase. Inhibitors are potentially useful intendents of ischaemic cell death. The apoptotic status of cells is aging or ischaemic cell death. The apoptotic status of cells is considered apoptotic status of cells is considered and non-considered apoptotic status of cells is considered and proteins have considered and promoting activity than wild-type BAD which can become phosphorylated on the specified Ser; forming a product that does not a heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family considered considering cells used to the considered considering and considered considering and considered considering activity than wild-type and that the does not a possible that decrease of the considering cell survival. The mutants with constanting cell survival. The mutants with constanting cell survival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 7; Page 60; 95pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1998-261422/23.

The position 112 and/or 136, relative to the murine BAD 204 as sequence. The CR present sequence represents a mutant BAD protein. Also described are: (1) CC fragments of mutant BAD protein. BAD protein. Also described are: (1) CC fusion proteins of mutant BAD protein. BAD proteins are used to treat corprevent diseases associated with reduced apoptosis, e.g. cancer, or inflammation and autoimmune disease. Polynucleotide sequences encoding inflammation and autoimmune disease. Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD creatment of excessive apoptosis such as AIDS, neurodegeneration, adding or ischaemic cell death. The apoptotic status of cells is companied by measuring relative amounts of phosphorylated and non-certained by measuring relative amounts of phosphorylated a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

serine phosphorylation; post-translational modification; apoptosis; signal transduction regulator; phosphoserine phosphatase; senescence; immunodeficiency disease; neurodegenerative disease; infertility; cancer, viral infection; lymphoproliferative condition; arthritis; inflammation; autoimmune diseases.
                                                                                                                result from immunodeficiency diseases, senescence, neurodegenorative disease, ischaemic cell death, reperiosion cell death, inferrility and wound healing. Decreased apoptosis may result from cancer, viral
                                                                                                                                                                         This sequence represents a novel serine-phosphorylated protein, BAD (BCI-XI/BCI-2 associated cell death regulator). The serine residue is phosporylated in a post-translational modification and allows binding to the 14-3-3 protein which is a signal transduction regulator. Modulators of phosphorylated BAD, which act through inhibition/activation of a phosphoserine phosphatase, are useful for preventing/treating increased/decreased apoptosis in a cell. The increased apoptosis may
                                                                                                                                                                                                                                                                                                                                        Claim 3;
                                                                                                                                                                                                                                                                                                                                                                                           Serine-phosphorylated Bcl-X-l/Bcl-2 Associated cell Death regulator polypeptide - useful for modulation of apoptosis associated with,

Sequence
                                  Infection, lymphoproliferative conditions, arthritis, infertility, inflammation and autoimmune diseases. Measuring the amount of phosphorylated BAD polypeptide and/or total phosphorylated compared to unphosphorylated BAD in a cell is useful for determining the apoptotic state of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Korsmeyer SJ

modifying fusion protein comprising Bad gene sequence fused via a short linker to diphtheria toxin translocation domain (DYTR). The functional apoptosis modifying fusion protein is capable of binding a target cell and integrating into or crossing a cellular membrane of the target cell and integrating into or crossing a cellular membrane of the target cell and the Bcl-XL domain, which targets the fusion protein to the target cell. The papoptosis modifying fusion protein comprises at least two domains: the DTR domain, which modifies an apoptocit response of the target cell. The fusion protein is useful for modifying cellular general papoptosis in a target cell, such as neuron, improve, cancer, neoplasm, macrophage, epithelial, stem, tumour or hyper-proliferative cell or an adipocyte. It is also useful for reducing apoptosis in a subject after transient ischaemic neuronal injury, or hyper-proliferative cell or an adipocyte. It is also useful for reducing apoptosis in a subject after transient ischaemic neuronal injury, or hyper-proliferative conditions through inhibition or enhancement of apoptotic cellular response, including neurodegenerative disorders such as Alzheimer's disease, Huntington's disease, spinal muscular atcophy, stroke episodes and unregulated cell growth as in tumour's and effectively throughout the body and targeted to selective tissue and

                                                                                                                                                                                                                                 The present sequence represents a protein of 166 amino acids. The sequence is disclosed as being a protein called BBC6 which regulates cell death through interaction with BC1-2. The DNA may be used for the production of the recombinant protein, which can be used in unspecified therapeutic or diagnostic procedures, as a molecular weight marker, and to raise antibodies that can be used in unspecified diagnostic or therapeutic applications and to reduce or eliminate the biological activity of the BBC6 protein in vivo.
                                                                                                                                                                                                                                                                                                                                                                  Claim 1; Column 11-12; 7pp; English.

Prod. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein search, using sw model

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -IVENTION:10 PROMOTES cell death. Successfully competes for the binding to Bel-x(I), Bel-2 and Bel-w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bel-x(I), but not that of Bel-2. Appears to act as a link between growth factor receptor signaling and the apoptotic pathways.

1. SUBUNNIT: Forms heterodimers with the anti-apoptotic proteins, Bel-x(I), Bel-2 and Bel-w. Also binds protein S100AN10 [By similarity). The Ser-112/Ser-136 phosphorylated form binds 14-3-3 proteins.

1. SUBCELIULAR LOCATION: Outer mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm.

1. DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bel-2 family.

1. PTM: Phosphorylated on Ser-112 in response to survival stimuli. Subsequent phosphorylations. This interaction then facilitates the phosphorylations. This interaction then facilitates the phosphorylations at Ser-155, a size within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BAD_MOUSE STANDARD; PRT; 204 AA.

Cell. Neurosci. 17:97-106(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bel-2 family.

PTM: Phosphorylated on Ser-113 in response to survival stimuli. Subsequent phosphorylation on Ser-137 promotes heterodimerization with 14-33 proteins. This interaction then facilitates the phosphorylation at Ser-156, a site within the BH3 domain, leading to the release of Bel-x(L) and the promotion of cell survival. Ser-137 is the major site of AKT/PKB phosphorylation. Ser-156 the major site of protein kinase A (CAPK) phosphorylation (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: CONTAINS A BCL-3 HOMOLOGY DOMAIN 3 (BH3). SIMILARITY: BELONGS TO THE BCL-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TISSUE SPECIFICITY: Expressed in all tissues tested, brain, liver, spleen and heart. In the brain, restric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       brain, liver, spleen and heart. In the brain, restricted to epithelial cells of the choroid plexus. Isoform alpha is the meaburdant form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      æ

BAD OR BBC6 OR BCL216.
binding to Bcl.x(L), Bcl.2 and Bcl.w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bcl.x(L), but not that of Bcl.2 (By similarity). Appears to act as a link between growth factor. receptor signaling and the apoptotic pathways.

1. SUBUNIT: Forms beterodimers with the anti-apoptotic proteins, Bcl.x(L), Bcl.2 and Bcl.w. Also binds protein $100A10 (By similarity). The Ser-75/Ser-99 phosphorylated form binds 14-3-3 proteins (By similarity).

1. SUBCELLULAR LOCATION: Outer mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm.

1. TISSUE SPECIFICITY: EXPRESSED IN AWIDE VARIETY OF TISSUES.

1. DOMAIN: Intact BH3 domain is required by BHK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl.2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mack J.

This interaction then facilitates the phosphorylation at Ser-118, a site within the B43 domain, lead to the release of Bcl-x(L) and the promotion of cell survival Ser-99 is the major site of AKT/PKB phosphorylation, Ser-118 major site of protein kinase A (CAPK) phosphorylation (by Similarity).

A TOTEET ALDBA "CRY9SIA" INDIBITION AND ITS FELATED PROTEINS IN SYFIAN

TOTEET ALDBA "CRY9SIA" INDIBITION AND OTHER MATRIX PROTEIN.

A BINDING PROTEIN BETWEEN HYALIFROMA AND OTHER MATRIX PROTEIN.

COLLIZATION, SYNTHESIS AND DEGRADATION OF HYALIFROMAN WHICH ARE

ESSENTIAL TO CELLS UNDERGOING BIOLOGICAL PROCESSES (BY

SIMILARITY).

COLUMN INTER ALPHA INTERIFF AND DEGRADATION OF HYALIFROMAN WHICH ARE

ESSENTIAL TO CELLS UNDERGOING BIOLOGICAL PROCESSES (BY

SIMILARITY).

COLUMN INTER ALPHA HALFING (11, 12 OR H3) AND ONE LIGHT CHAIN,

BIKUMIN. INTER ALPHA HALFING (1 ALPHA I) IS COMPOSED OF H1, H2

AND BIKUMIN, AND PRE-ALPHA INTERITOR (1 ALPHA I) OF H3 AND BIKUMIN,

AND PRE-ALPHA INTERITOR (P-ALPHA I) OF H3 AND BIKUMIN,

A SULLATE BRIDGE TO THE TIESTE C-TERMINAL ASPARTATE (BY

SIMILARITY).

ELONGS TO THE ITST C-TERMINAL ASPARTATE (BY

SIMILARITY).

ELONGS TO THE ITST HAMILY.
